

## 235-18 Surface Mount Adapter

Put an instrument mount anywhere!

The **235-18** allows you the flexibility of having an instrument mount anywhere you want one! This adapter provides a 3½" x 8 external thread as a mount for many instruments and other adapters. The 235-18 is configured to mount on any flat surface. A flange with six countersunk bolt holes is provided for secure mounting. You may also be interested in our 5146, which does not have the flange, or the 235-6, which has the same functionality but also has internal threads to accommodate other products such as our model 800 precision lift.

Look at all of our instrument adapters, or see an entire list of our heavy duty or portable stands.

### Specifications

**Effective height:** 0.187" (4.7 mm) This is the vertical distance between the very bottom of the unit and the top interface surface, which would coincide with the bottom of an instrument or adapter which is mounted on top of the unit.

**Bolt hole pattern:** The six countersunk holes are 0.169" in diameter, 60° apart on a bolt circle of 3 15/16" diameter.

**External thread:** 3½" x 8

**Approximate weight:** 1 lb. (0.5kg)

### May be used with...

- Fits onto any customer-supplied surface with a matching bolt-hole pattern.
- Accepts any product having an internal 3½" x 8 thread.
